2 INTRODUCTION

The DSDP Portal user guide explains the functionalities with step-by-step instructions on how to navigate the portal.

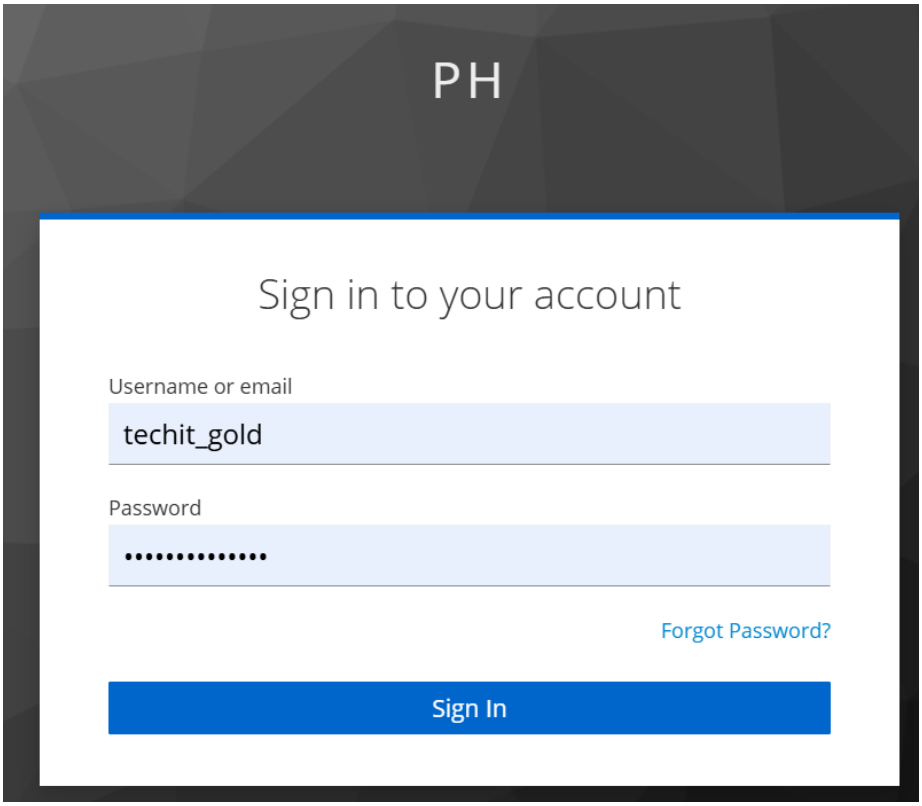
The main objective is to provide Safaricom Partners with a platform that allows them to manage customer and service lifecycle for digital third-party products and services.

The DSDP Platform allows the integration of all partners into a single platform with a focus on managing Content Services.

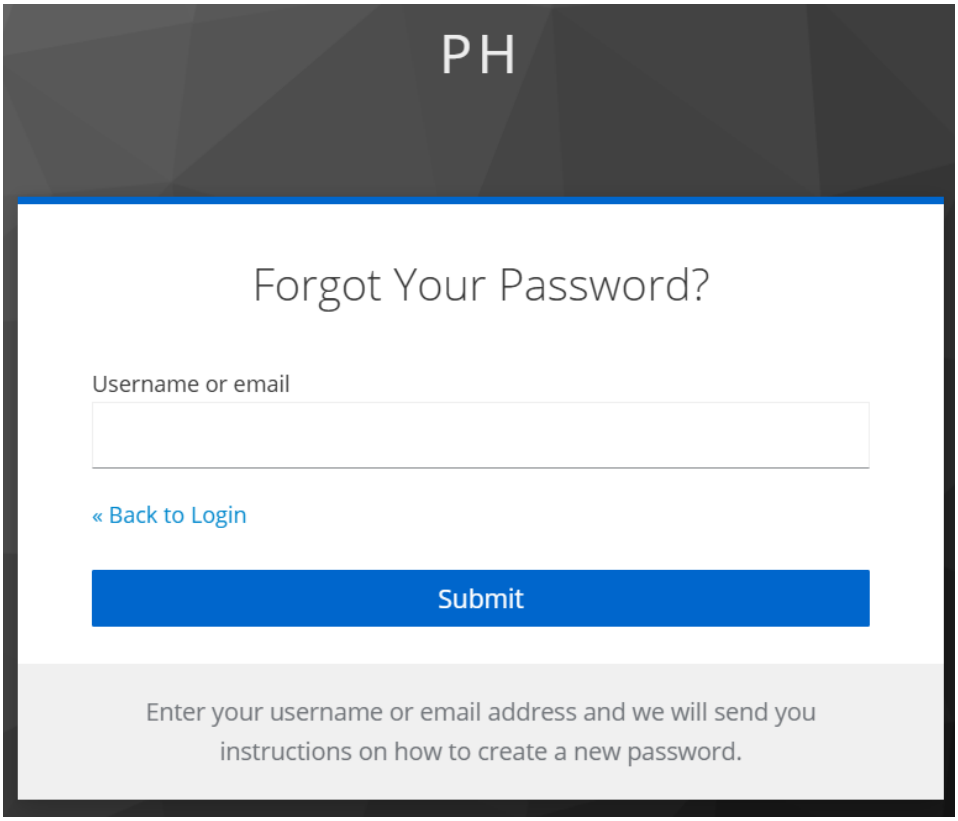
It also provides tools for managing partners, products, pricing, and commercial offers. It also supports handling short codes, keywords, communication channels, and bulk SMS operations.

3 LOGIN & USER MANAGEMENT

User starts by accessing the DSDP Portal homepage, fills the username and password and click on “Sign in” button. Login credentials will be sent to the configured email.

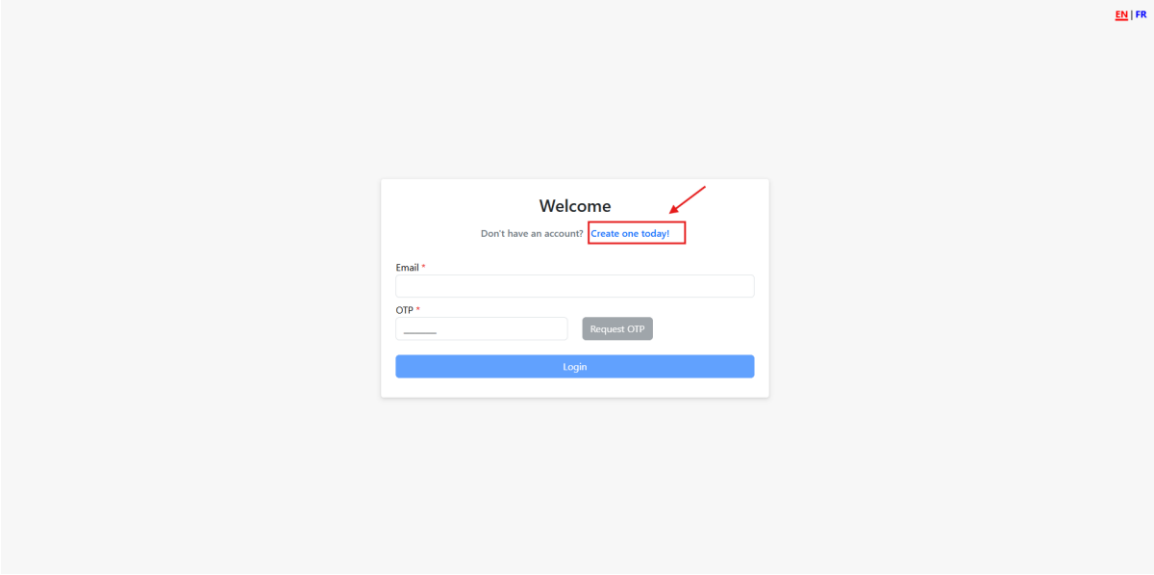


To reset the password, the user can click on “Forgot Password” link to input their username or email address for a reset.

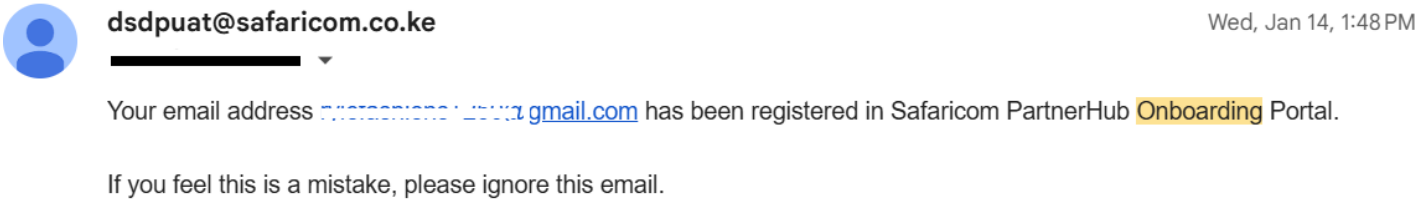


3.1 PARTNER SELF-ONBOARDING

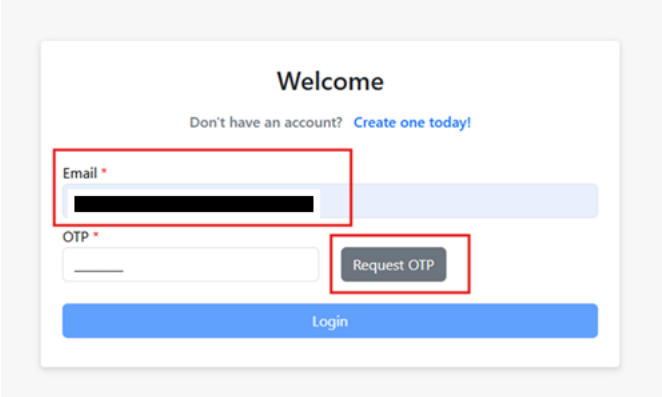
After migrating to the new DSDP platform, new partners will be able to register themselves through a self-onboarding portal accessible via a dedicated URL. The partner clicks on 'Create one today' to start the process:



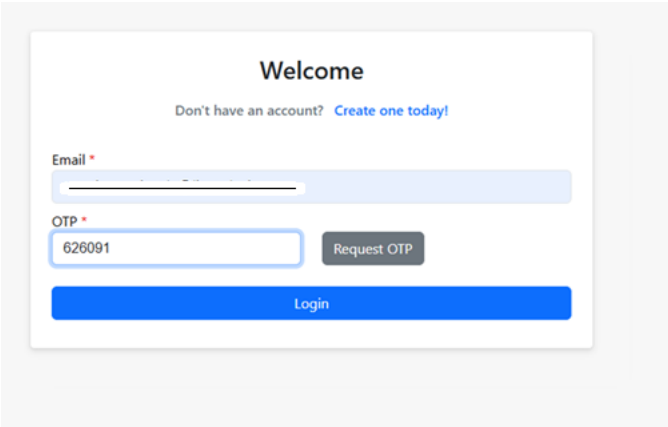
The partner completes the required fields and submits the form, after which they receive a confirmation email acknowledging their registration.



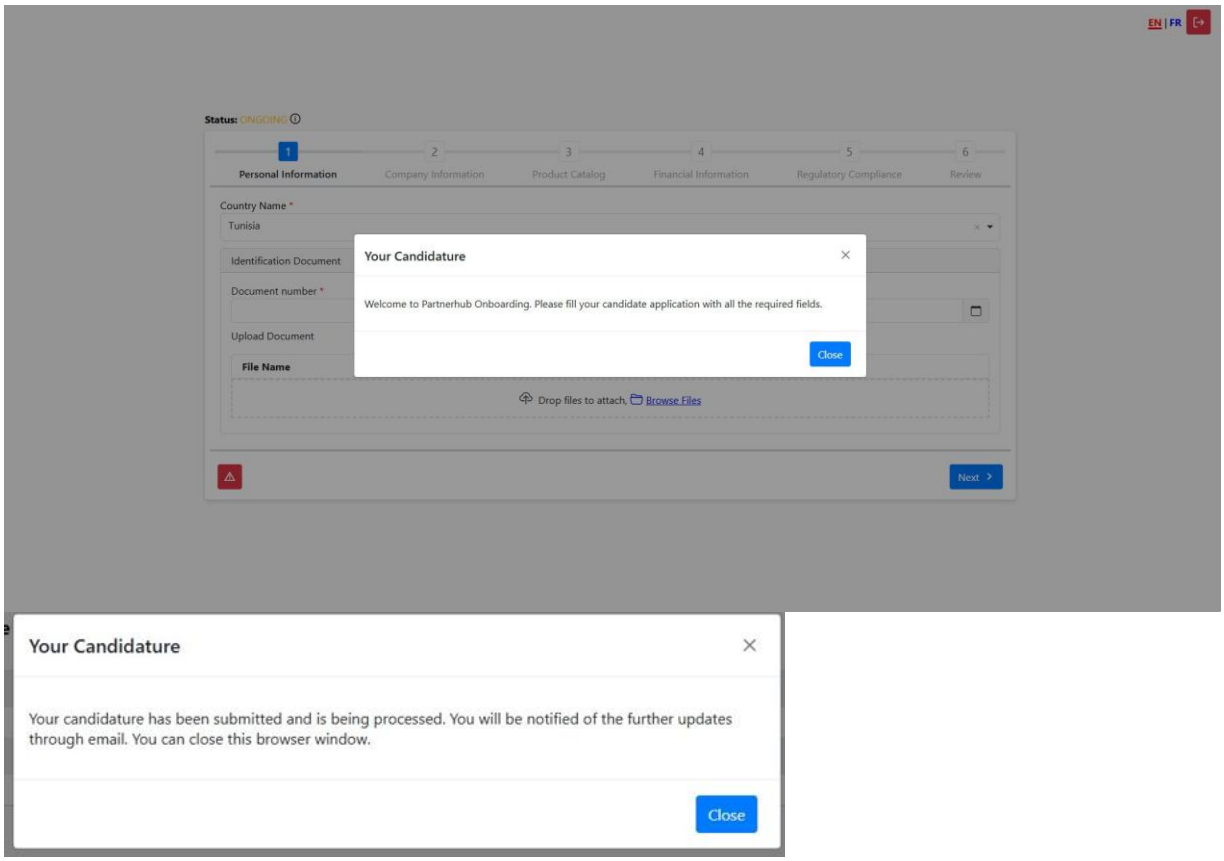
Afterwards, the partner will enter their email address to request an OTP, which will be sent to the registered email for verification.



The partner then enters the OTP pin on the landing page and clicks on login button:

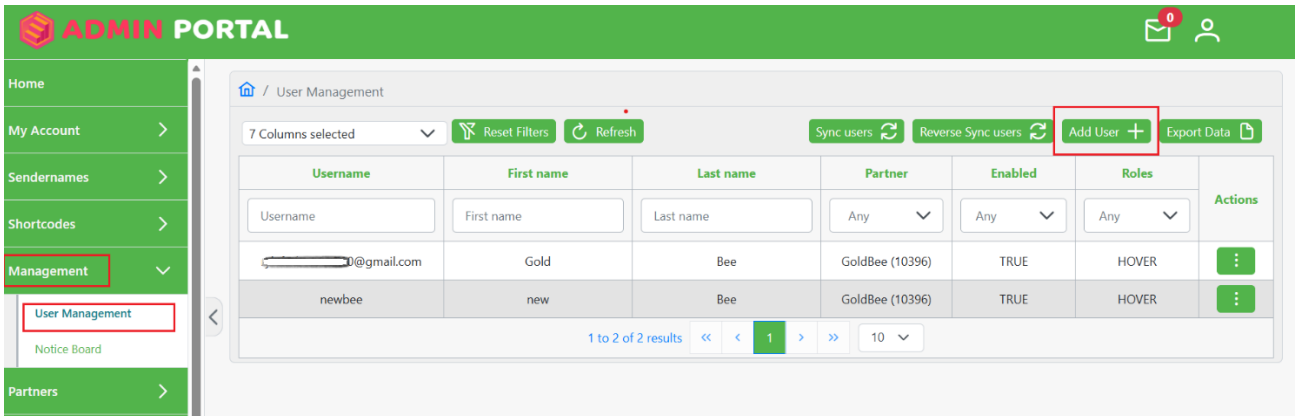


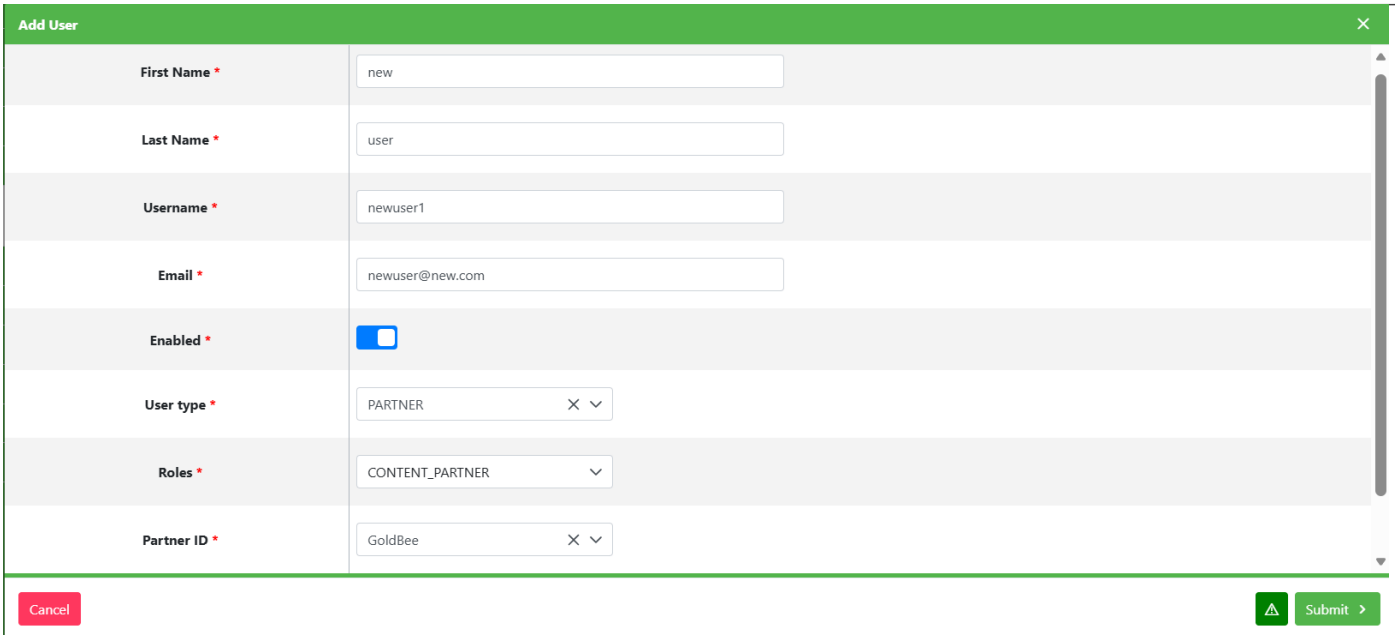
They will be redirected to the following page with a welcome message where they will fill in the mandatory fields and submit their application.



The partner candidacy will be published for review by the Safaricom commercial team. Once the partner candidacy is approved, the partner will receive their credentials on the registered e-mail and log in to the portal.

To create a new user, the partner navigates to the Management tab, selects "**Add User**", fills in the required details, and submits the form.

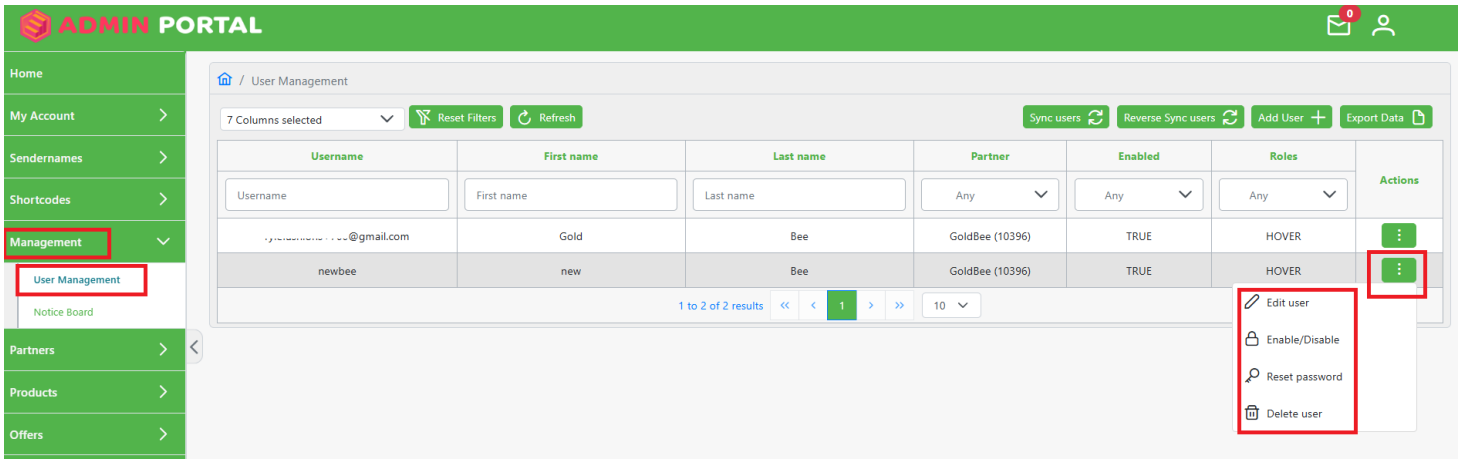




Add User
First Name *
new
Last Name *
user
Username *
newuser1
Email *
newuser@new.com
Enabled *
User type *
PARTNER
Roles *
CONTENT_PARTNER
Partner ID *
GoldBee
Cancel
Submit

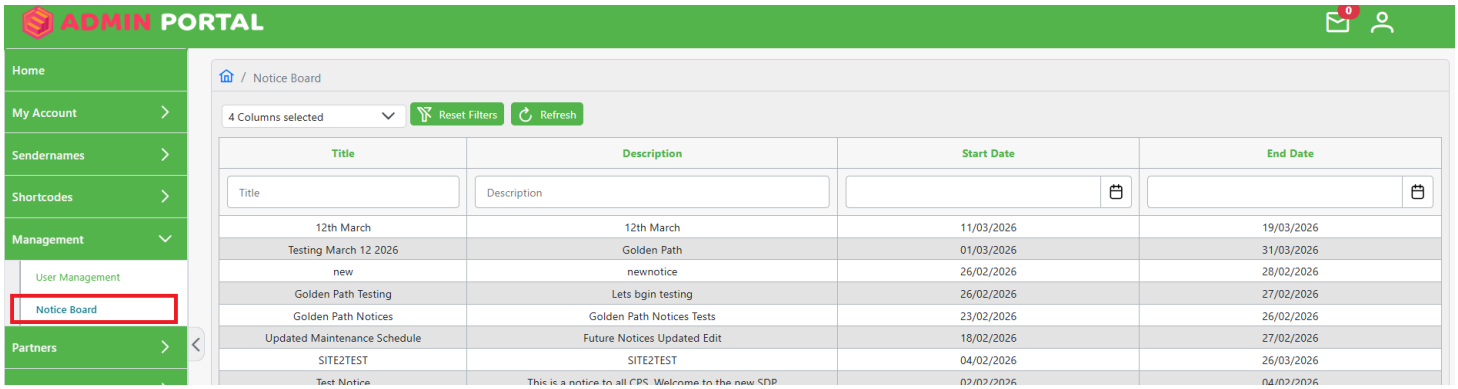
Once created, the new user receives their login credentials by email and can now proceed to interact with various modules on the portal.

If the partner wishes to delete/disable/enable or reset user password, they can do so by clicking on the action menu for the specific user.



3.2 NOTICES

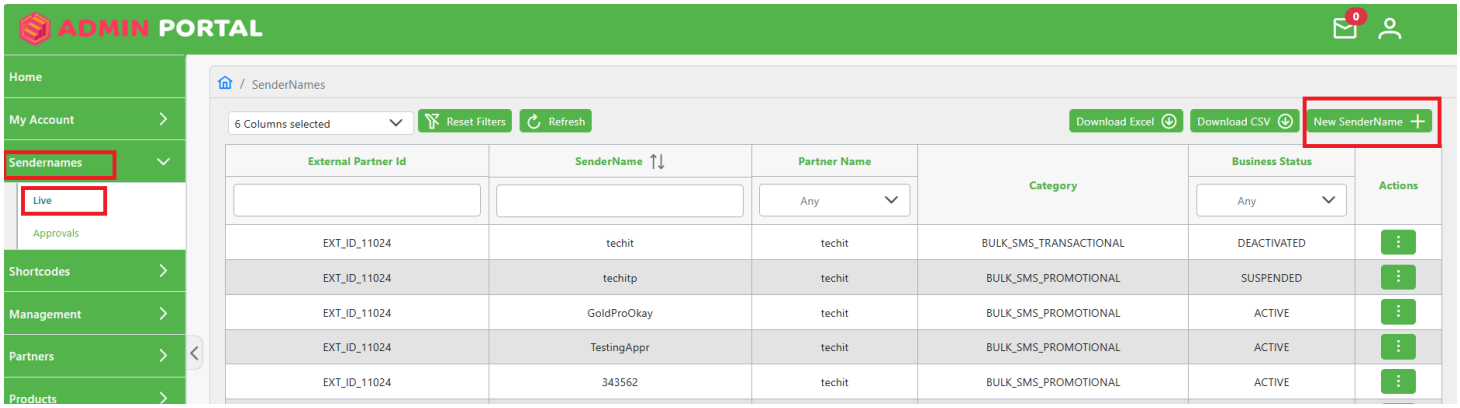
Safaricom team will share important updates, announcements, and information with users in a centralized place about changes, new features, maintenance, or other relevant communications without needing direct messaging via the noticeboard.



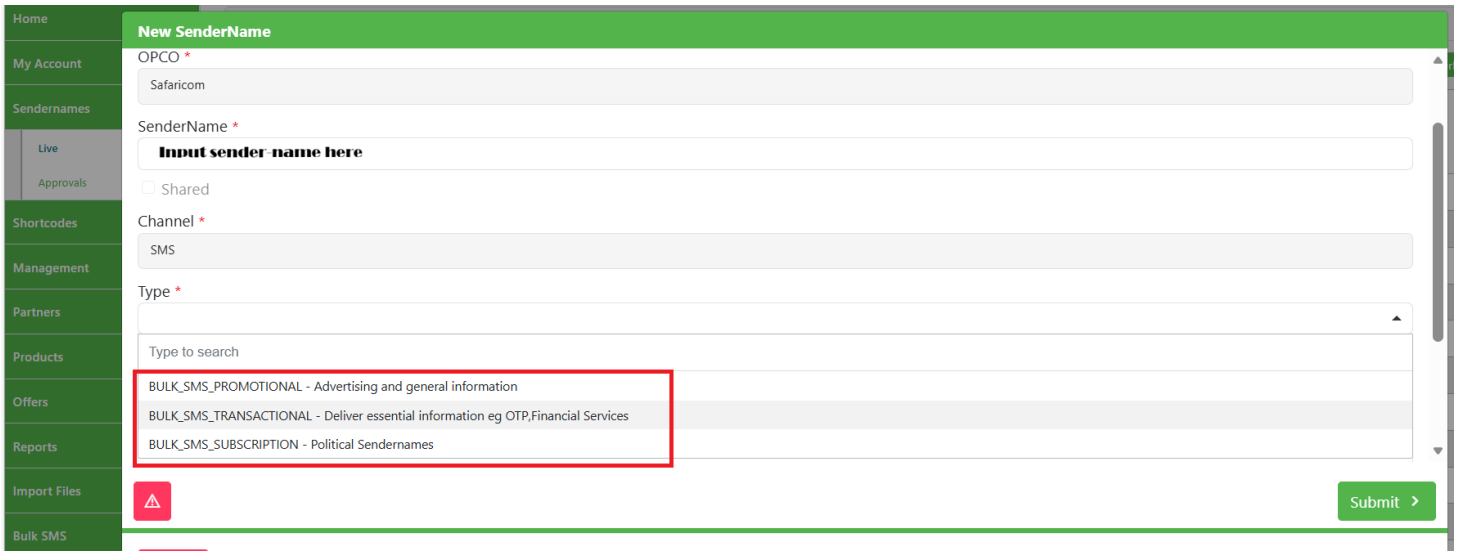
4 SENDERNAMES

To manage sender names, the partner navigates to the **SenderName** tab. Here, they can create a new sender by clicking **"Add Sender"**, filling in the required details, and submitting the form.

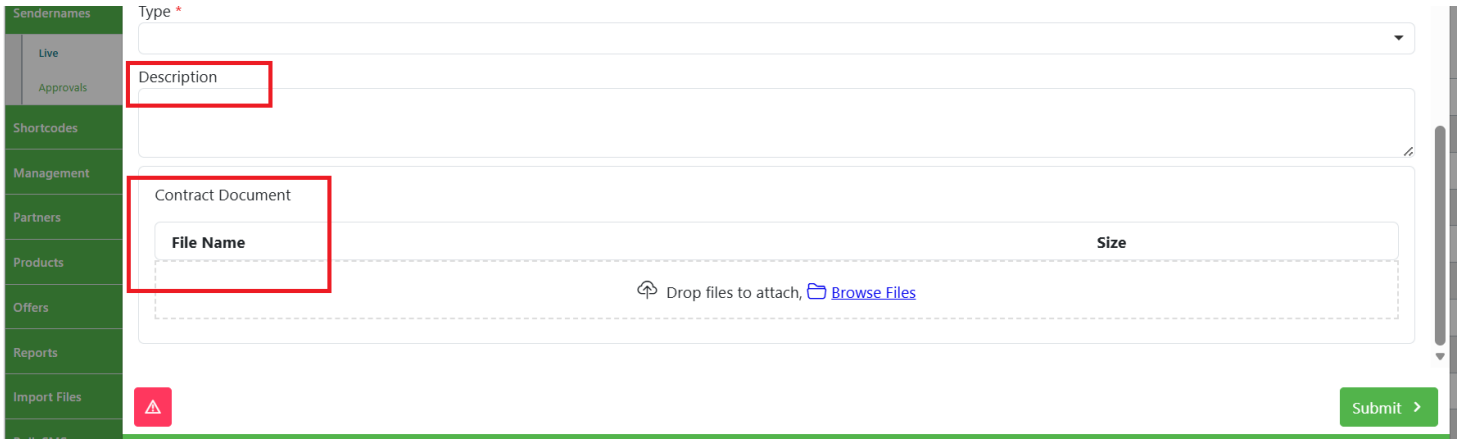
Existing (active or suspended) and deactivated senders can also be viewed directly in the same tab, allowing partners to review and manage all their sender names in one place.



The partner inputs the desired sender name and reclassification as per their business model.

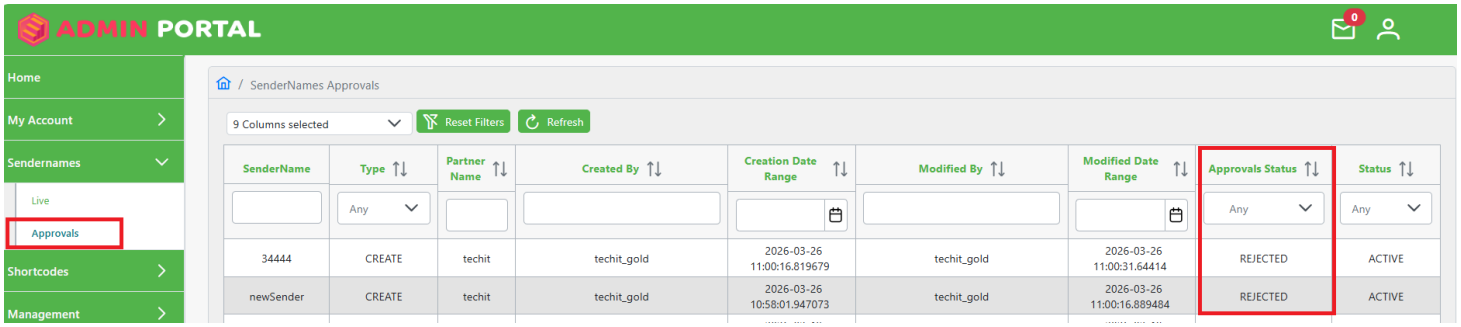


For transactional senders, input the sample messages to be transmitted via the sender on the "**Description**" box and attach the KYC documents under "**Contract Document**" section.



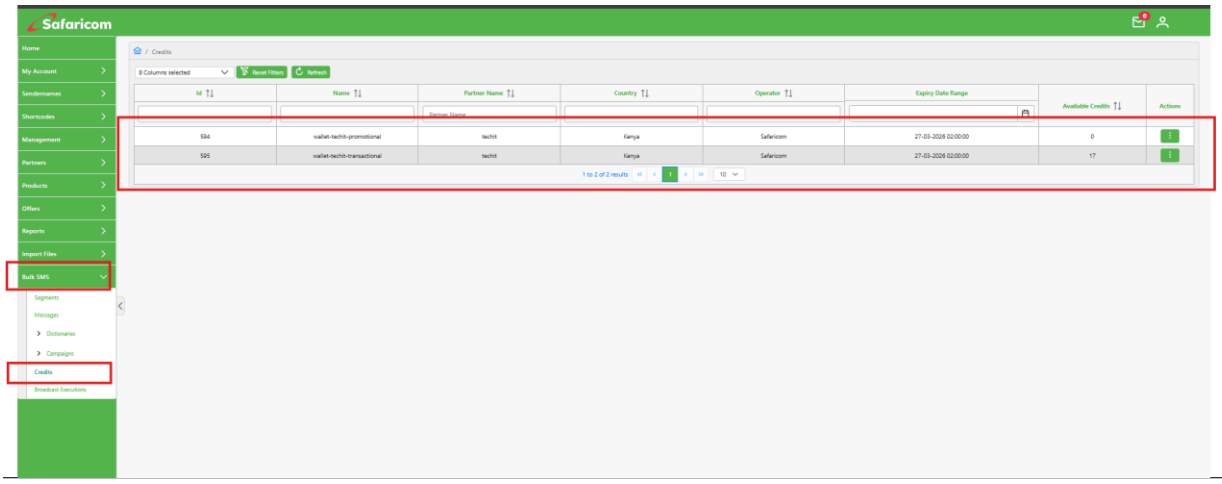
Navigate to "**Approvals**" tab to check any sendernames pending approval or those that have been rejected.

NOTE: Rejected sendernames cannot be edited. The partner will need to create the sendername a fresh and submit for approval.



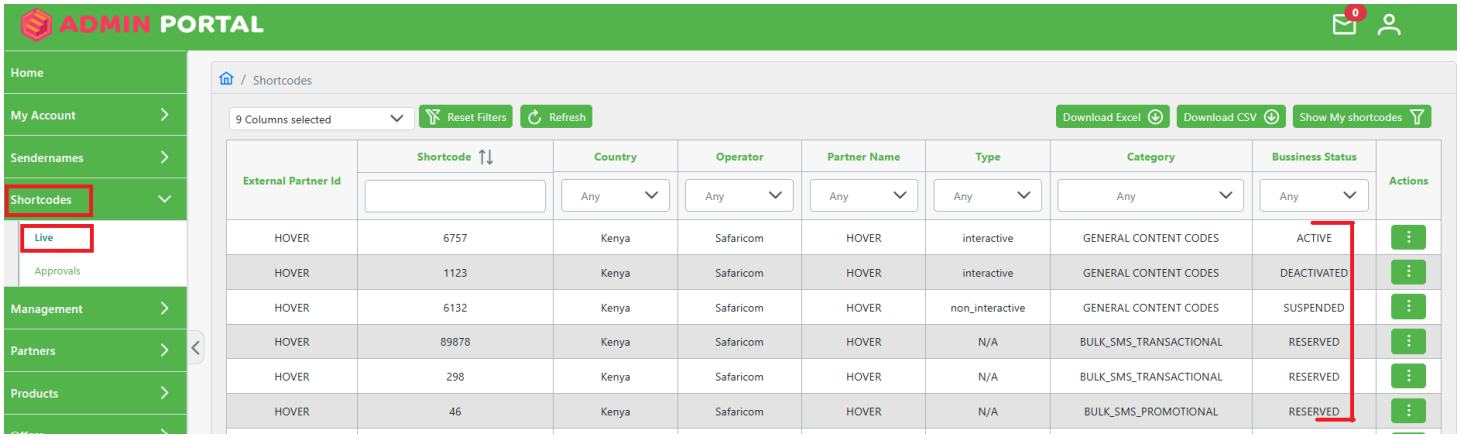
5 BULKSMS

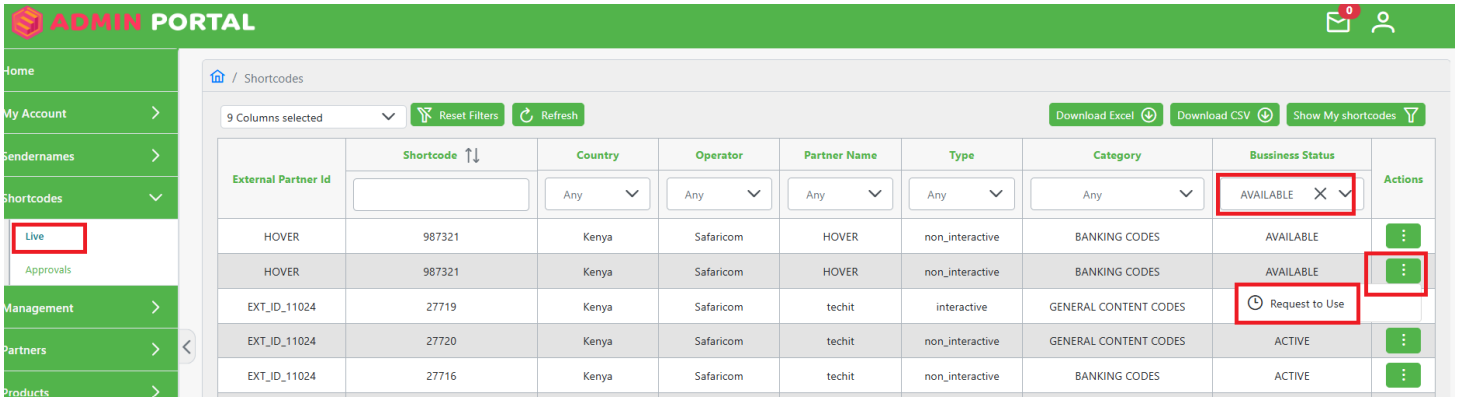
The user can click on **'Credits**´ to view available units:



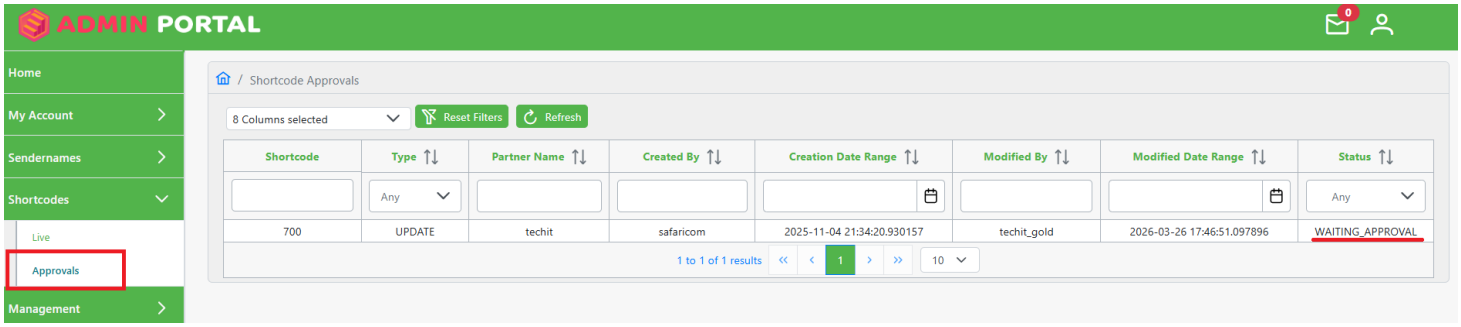
6 SHORTCODE

Partners can request a shortcode directly from the **Shortcodes** tab by selecting an available code and clicking on "request to use". This will eliminate the need to contact PRSP support to share a list of shortcodes. Shortcodes are organized by category (e.g. gaming codes, banking codes etc), and once approved by the commercial team, partners can start using the shortcode freely.

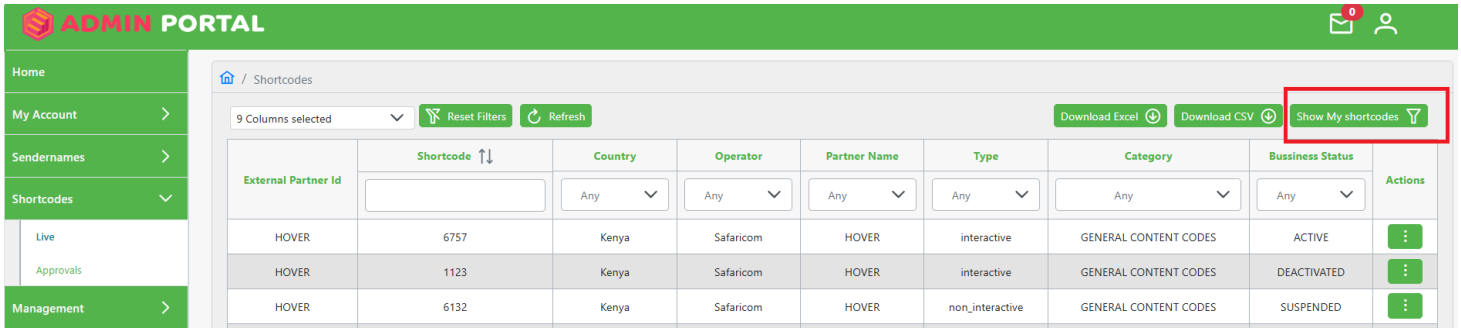




When a partner requests to use a shortcode, the shortcode status changes from **Available** to **Reserved**. This will be shown on "Approvals" tab.



In the event that the shortcode is rejected, it will be put back in the pool of available shortcodes. When the shortcode request is approved, it will appear under live shortcodes on “My Shortcodes”



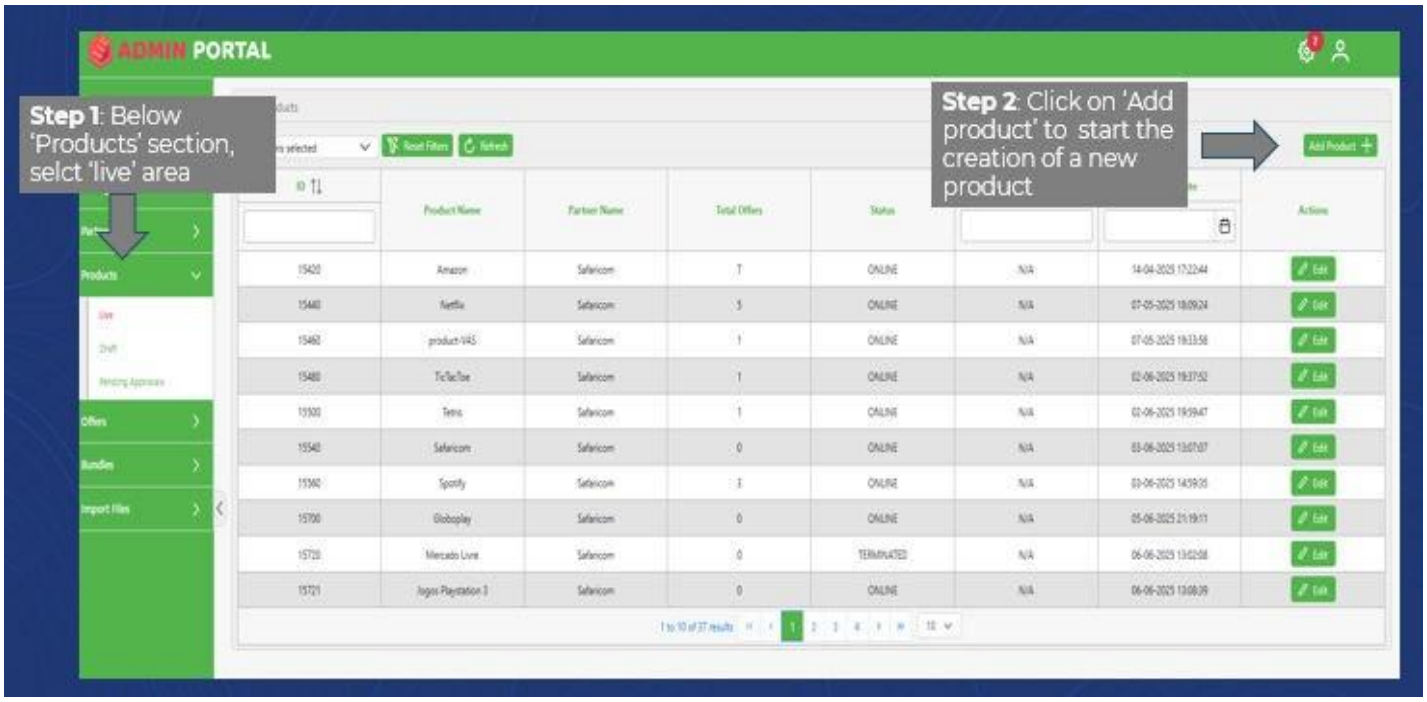
7 PARTNER

Under Partner tab, the partner will be able to see details captured for their account during the onboarding process as well as any KYC documentation.

8 PRODUCT MANAGEMENT

8.1 Product Creation

Users with proper permissions navigate to Products tab > Live > Add Product and fulfill all the mandatory fields with *:

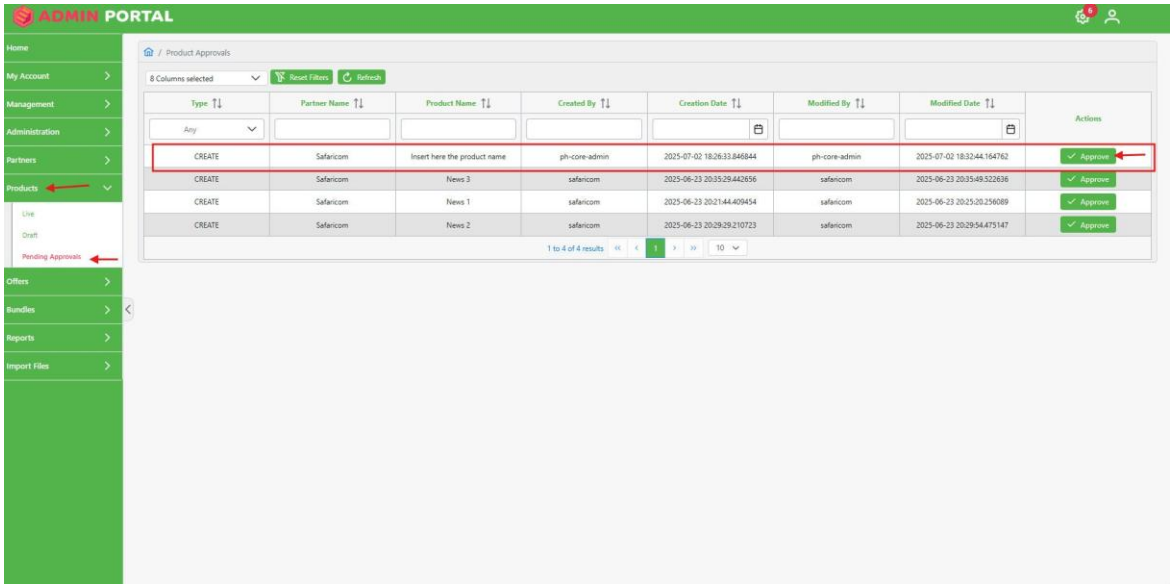


Product type – currently this is by default VAS

Once the partner has filled in all details, they will review, and if it is okay, they will submit for further review by the Safaricom commercial team.

8.2 Product – Pending Approval

After submitting the created product, it will be displayed on 'pending approvals' section, awaiting approval.



8.3 Product Approval

If the product is approved, it will be moved to '**Live**' section.

Rejected products will appear under **Drafts** and can be reviewed for editing and re-submission.

If product submit is not done, when adding a product, the draft will appear under **Drafts** section, where the partner can edit the product.

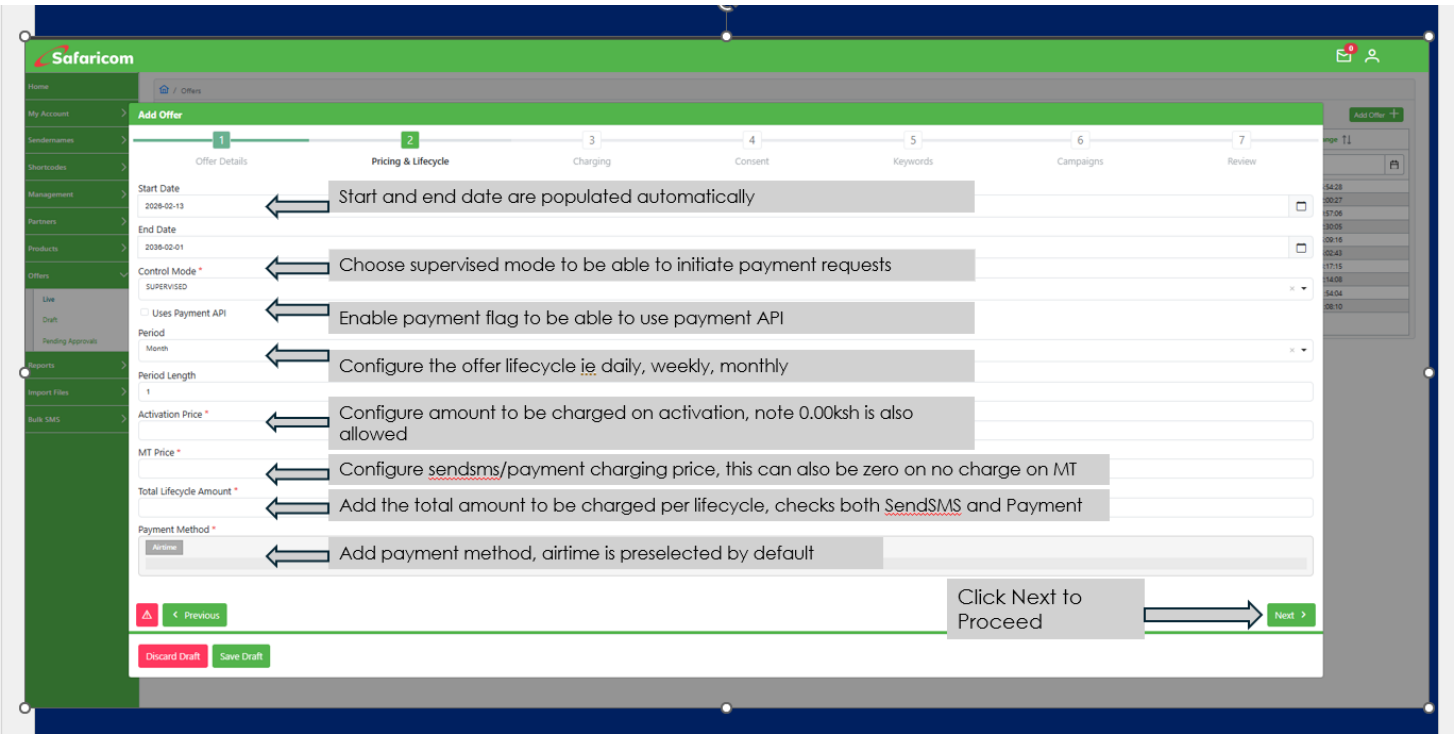
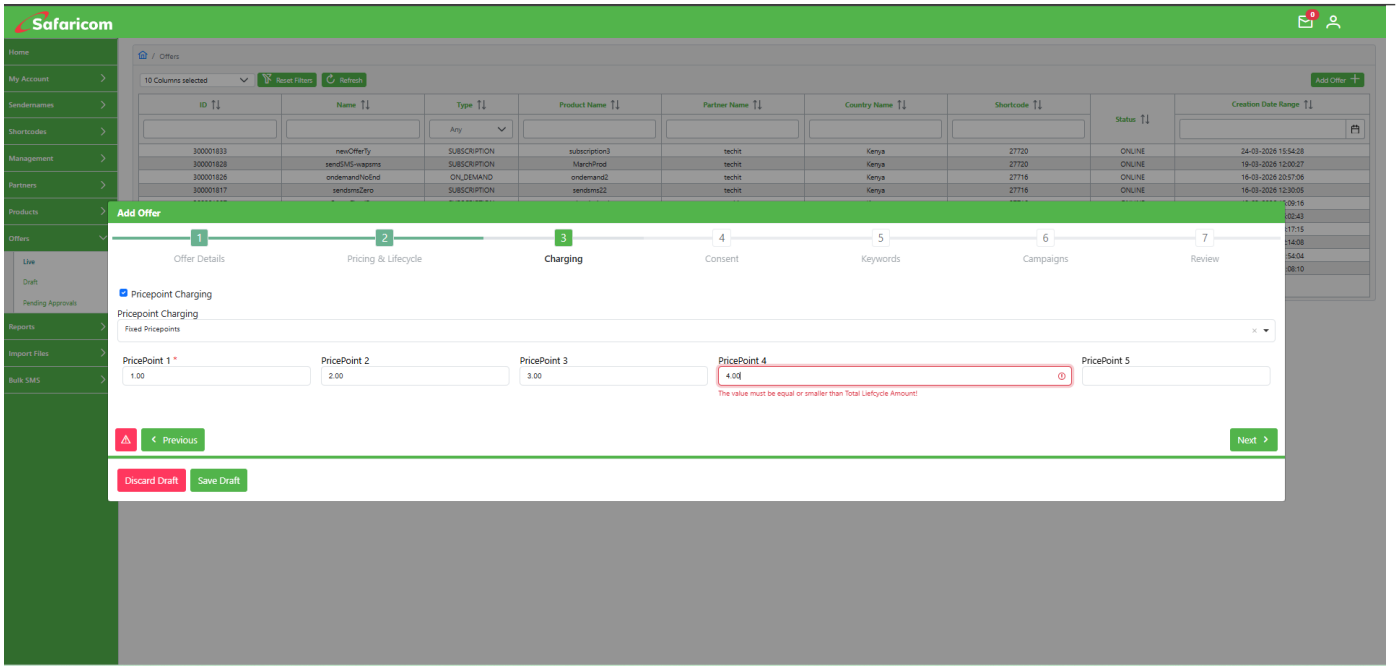
Step Pricing & Lifecycle:



Step Charging

***<u>Fixed Price Points</u>*;**

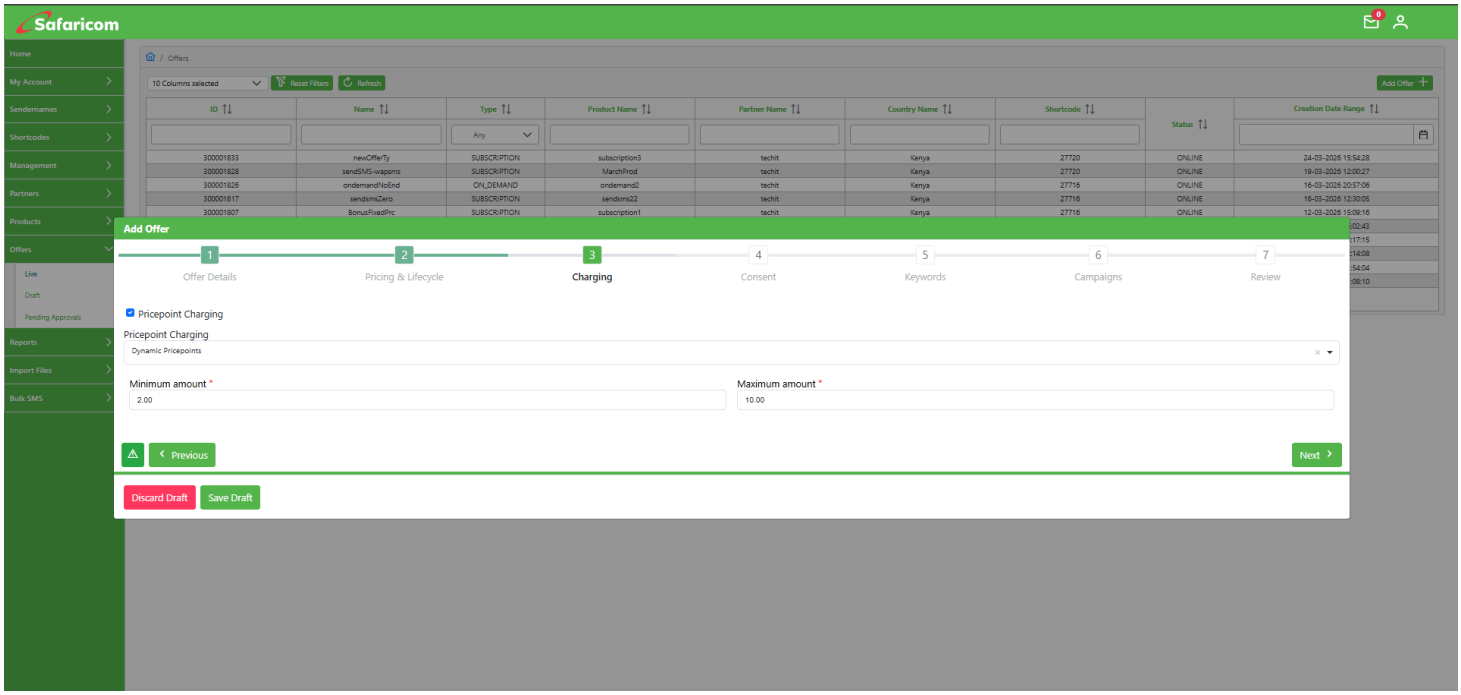
This is similar to static billing. Add pricepoints that are within the lifecycle amount. You cannot configure a pricepoint greater than the Total Lifecycle amount. Example if Total lifecycle = 3, you can have pricepoint 1 = 1, pricepoint 2 = 2 and pricepoint 3 = 3; Meaning on your request you can have charge amount = 1 or 2 or 3.



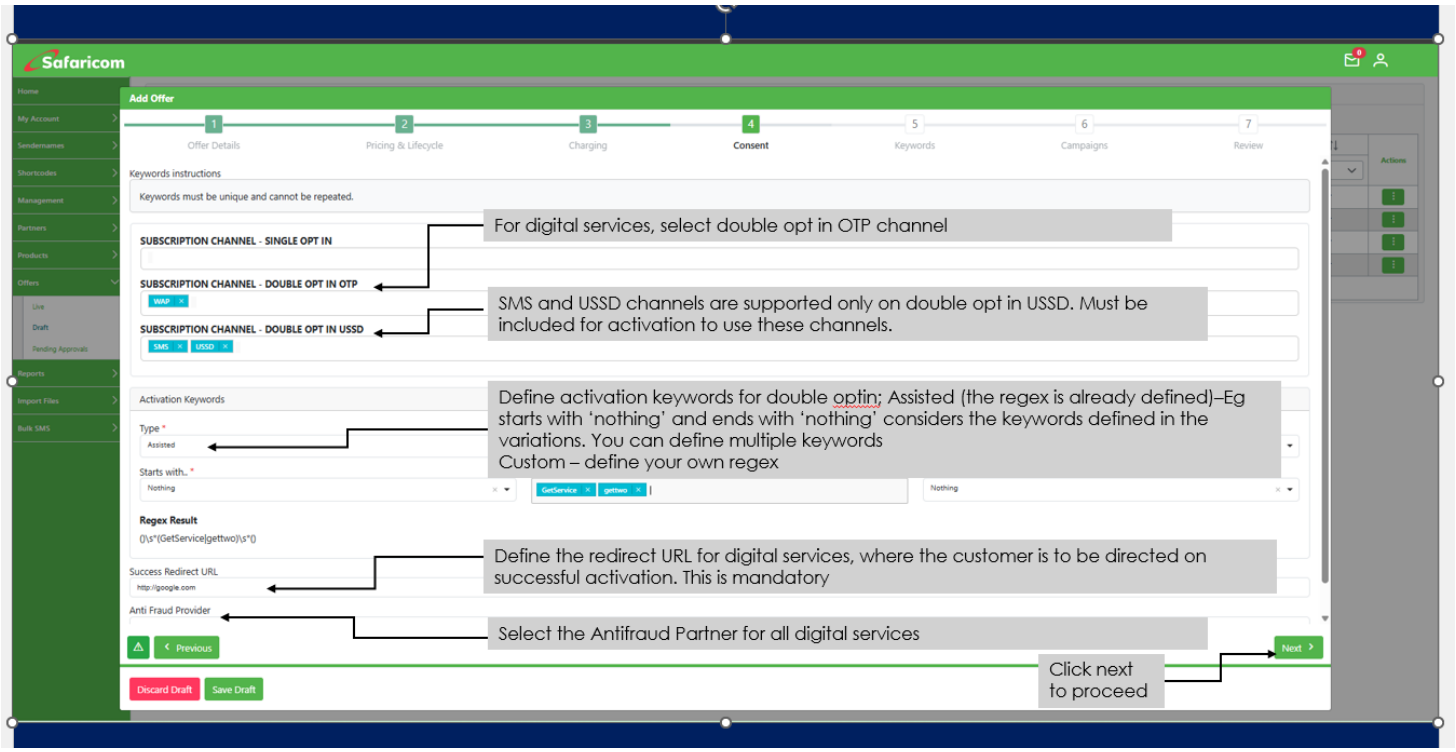
Dynamic Pricepoints

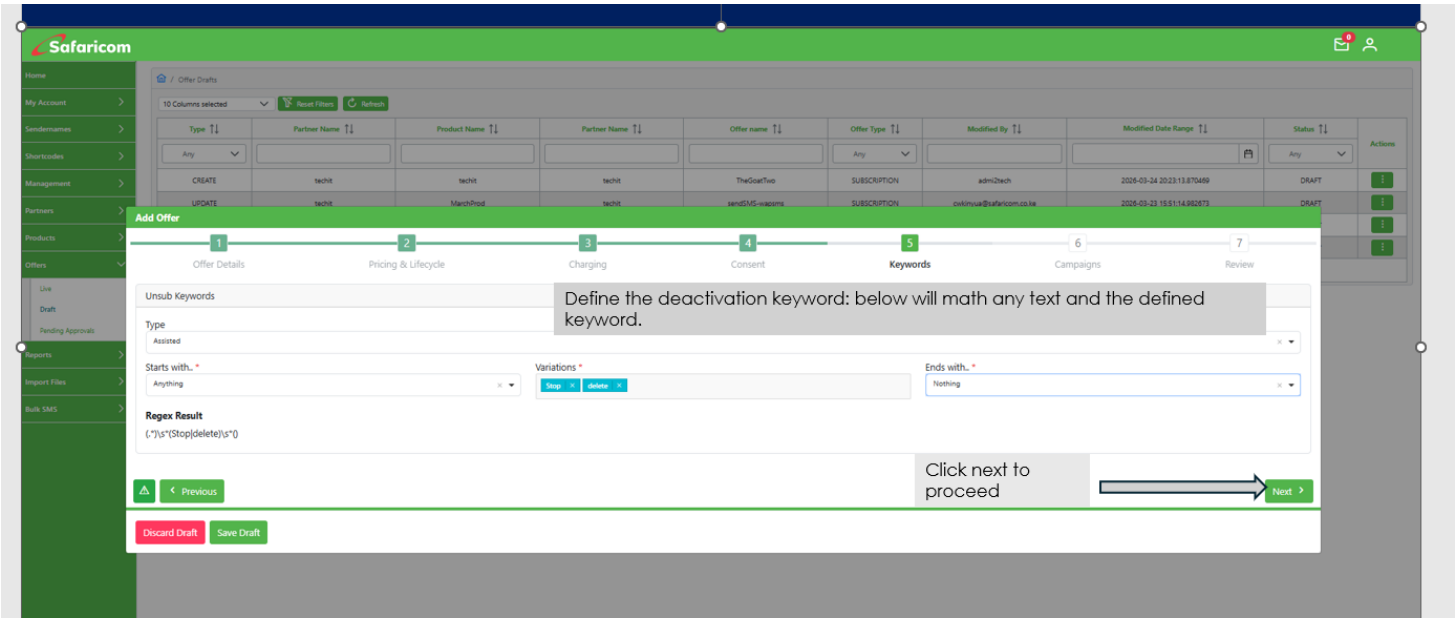
Select the range within which you want to charge. Minimum amount, and the maximum amount equal to or less than the Total Lifecycle amount.

For this case, charge amount will be anything between Ksh.2 and Ksh.10

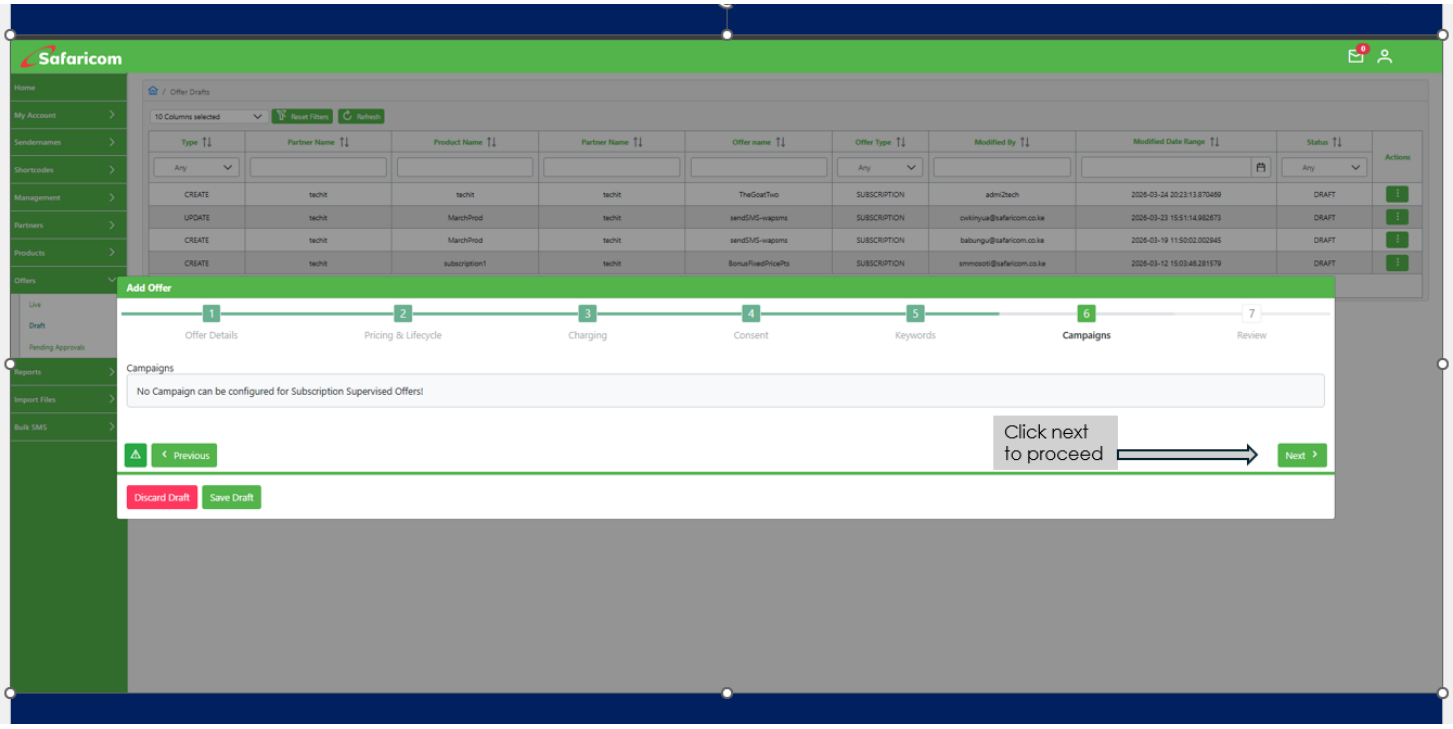


After fulfilling at least all mandatory fields, click on next to move to the next step - Consent.

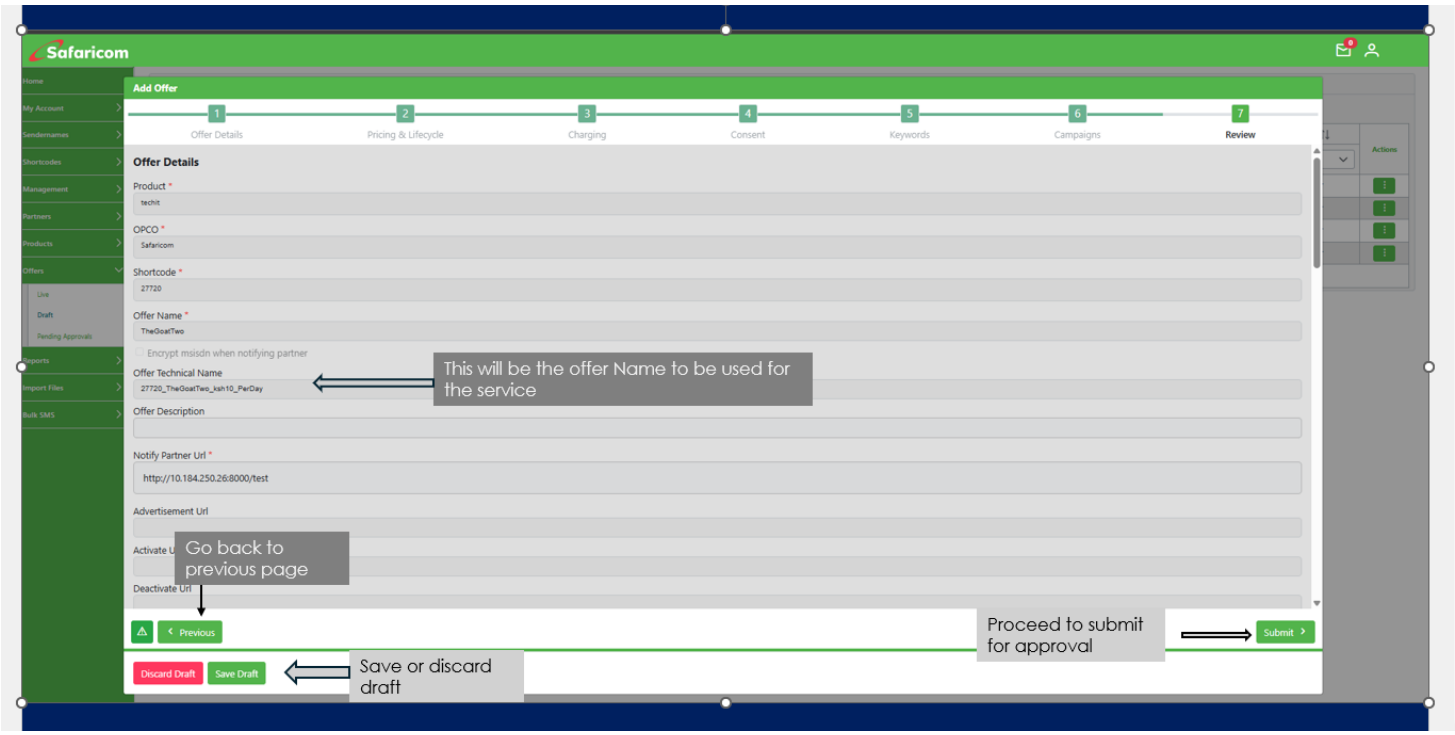




No campaigns are available for Supervised offer, proceed to the next page

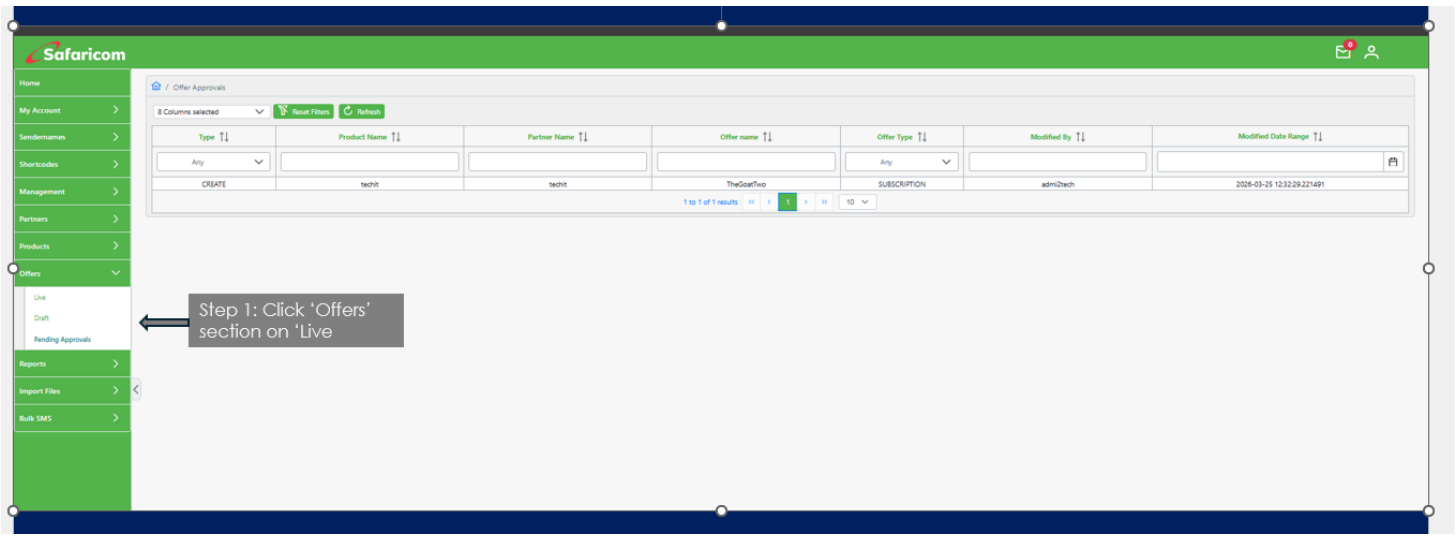


In the last step, the user will be able to review all the choices he made and can always select 'previous' button to edit any field, if necessary.



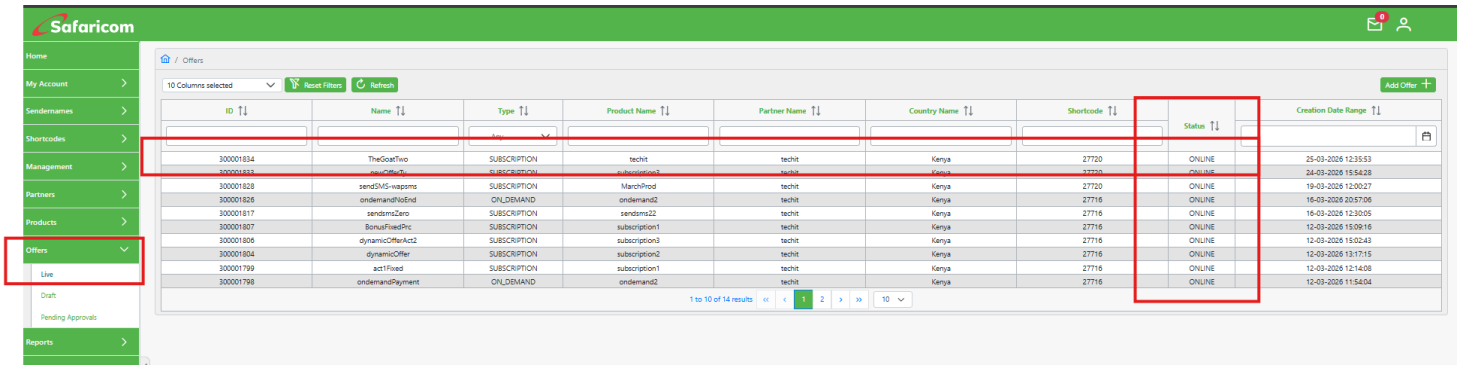
9.1.1 Subscription Offer – Pending Approval

After submitting the created Subscription Offer, it will be displayed on 'pending approvals' section, where the user with proper permission can proceed with the approval or rejection:



9.1.2 Subscription Offer – Approved Offer

When the subscription offer is approved, it will be displayed on '**Live**' section:



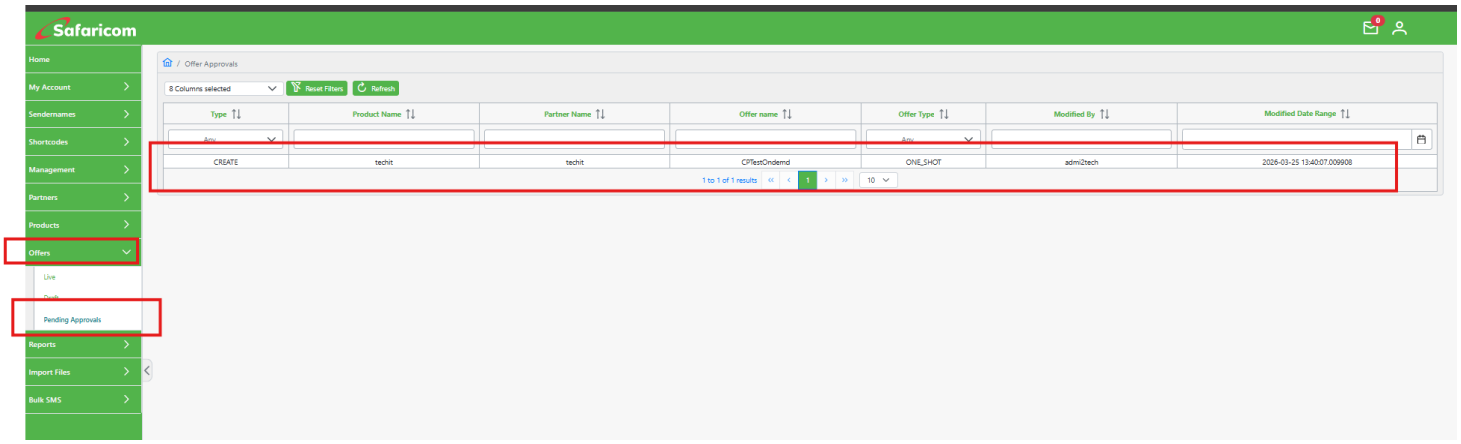
9.1.3 Subscription Offer Editing

Partner cannot edit the offer; any request to be shared on email

9.2 On-demand Offer Creation

9.2.1 On-demand Offer – Pending Approval

After submitting the created on-demand offer, it will be displayed on '**Pending Approvals**' section for review by PRSP Support.



9.2.2 On-demand Offer – Approved offer

If the on-demand offer is approved, it will be displayed on '**Live'** section.

9.2.3 On-demand Offer – Editing

The partner will not be able to edit the offer.

10 REPORTS

Partners can access the various reports under the "Reports" tab. There will be reports related to subscription trends, revenue, and bulk SMS. They will be able to filter data based on dates, offer codes, product codes, short codes and several other parameters.
